

Are there design elements that feel unresolved to you? If there are, do you know why?

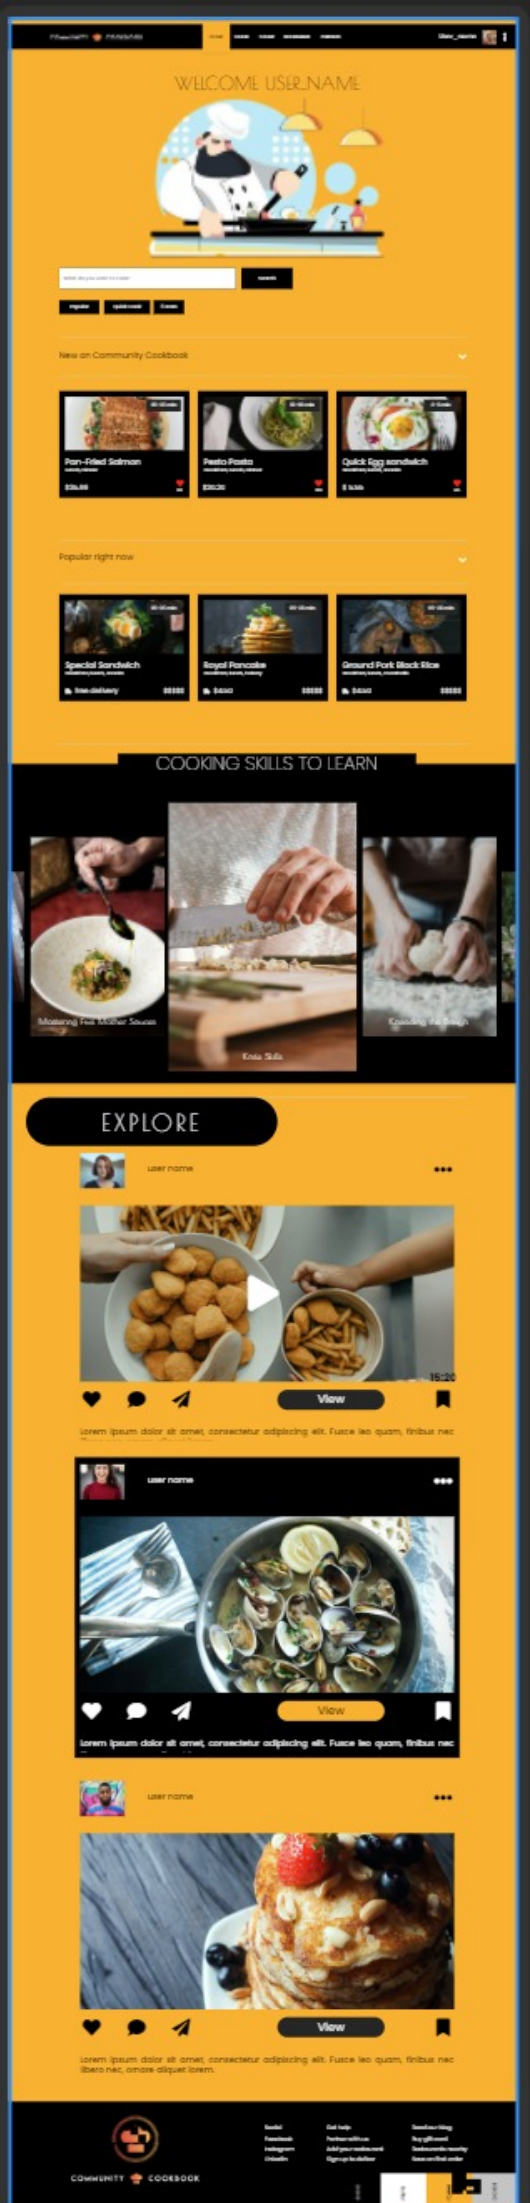

I am pretty pleased making this design, and I enjoyed making it. I am trying to make the desktop layout similar to my mobile wireframe layout. I have added one screen in desktop mode: the intro screen. Customers can search for and make an authentic dish using this app. They can watch tutorials, search for recipe tutorials, etc. If they want to add something to their cart, add friends, or upload their video tutorials/content, they must log in to their account or sign up. This design that I made is decent, but I want to be aware not to over-design it.
