My Wardrobe

Jackets and Coats (4)

When clicking on a specific item it would bring up a view of said items details

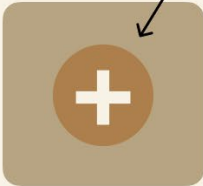

Users would be able to scroll through their clothes

Shirts (5)

Clicking this will open the view where users can add an item to specific clothing type

Pants (3)

Users can scroll down to see more of their wardrobe

Outfits

Create an outfit

There could be more options here but right now I can't think of any

When you click on an outfit it will give you a specific view for it with all the details of the items and give you options to edit it.

I am decently happy with my designs; I think they display well enough what I want these two views to look like. Some issue I could see is the ability to scroll through specific types of clothing in your wardrobe. Making the user move their mouse constantly left and right could be tedious. With the second view, I want to add more design elements to the left of the view, under the create an outfit button, however, right now I can't think of anything.
